CeraPaint 1
Laquer for handpainting with ceramic pigments

Chemical basis:
Natural resins in terpene-containing solvent

Characteristics:
Appearance: clear liquid
Solubility: water-insoluble
Density (20 °C): approx. 0,95 g/cm³
solids content: approx. 52%

Safety data: see MSDS

Shelf-life / Packaging:
12 months when stored in dry and cool conditions
drums of 25 and 180 kg

Application:
CeraPaint 1 is a traditional medium for handpainting, which contains a binder to assure good adhesion of the decoration to the substrate.
The paste composition is dependent upon the binder absorption by the pigment and the desired colour intensity. We recommend a mixing ratio of 100 parts in weight of colour and 60 to 120 parts in weight of medium. This mixture should be homogenized on a 3 roll mill. The paste might be diluted with solvent according to the desired viscosity.

The colour takes 15 to 25 minutes to become touchdry.

Safety information:
On account of its solvent content **CeraSpray 1** must be kept away from all open flames. Containers should always be stored tightly sealed.

The above results have been obtained from trials in our laboratory and plant. In the light of changing conditions they can serve only as a guide and are therefore offered without obligation. We ask you to observe the possible rights of third parties.
